

# Package: utilitybeltgg (via r-universe)

August 31, 2024

**Title** What the Package Does (One Line, Title Case)

**Version** 0.0.0.9000

**Description** What the package does (one paragraph).

**License** MIT + file LICENSE

**Encoding** UTF-8

**LazyData** true

**Roxygen** list(markdown = TRUE)

**RoxygenNote** 7.2.0

**Imports** assertthat, forcats, ggplot2, ggpubr, ggthemes, magrittr,  
rlang, scales

**Suggests** lifecycle, testthat (>= 3.0.0)

**Config/testthat/edition** 3

**Repository** <https://selkamand.r-universe.dev>

**RemoteUrl** <https://github.com/selkamand/utilitybeltgg>

**RemoteRef** HEAD

**RemoteSha** 94bdae63af4ff3b6162e001f609d0c5c2ad78ca1

geom_barplot_counts	<i>geom barplot counts</i>
---------------------	----------------------------

---

## Description

Add text labels indicating counts above barplot columns. Works on plots that have a `geom_bar()` layer. Works even if you flip axis with `coord_flip()`.

## Usage

```
geom_barplot_counts(
  distance_from_bar = 1.5,
  orientation = "h",
  size = 4,
  fontface = "bold",
  alpha = 0.8,
  color = "black",
  family = "Helvetica"
)
```

## Arguments

distance_from_bar	distance between text and cbar
orientation	orientation of barplot ("h" / "horizontal" / "v" / "vertical")
size	size of text (number)
fontface	Font face ("plain", "italic", "bold", "bold.italic") (string)
alpha	transparency (number)
color	colour (string)
family	font family (string)

## Value

ggplot geom

## Examples

```
mtcars %>%
  ggplot2::ggplot(ggplot2::aes(x=as.character(cyl))) +
  ggplot2::geom_bar() +
  ggplot2::xlab("cylinders") +
  geom_barplot_counts()
```

---

geom\_crossbar\_predefined

*Add crossbar to ggplot*

---

## Description

Adds a crossbar to a ggplot. Best used when comparing one categorical and one numeric variable using `geom_point` / `geom_jitter(height=0)`.

## Usage

```
geom_crossbar_predefined(
  summaryfunction = stats::median,
  width = 0.4,
  size = 0.3,
  colour
)
```

## Arguments

summaryfunction	a function run on the y aesthetic to determine where line is drawn. Options include median, mean, max, min, or any other function that summarises a numeric vector into a single number (function)
width	width of crossbar
size, colour	ggplot aesthetics

## Value

ggplot geom

## Examples

```
mtcars %>%
  ggplot2::ggplot(ggplot2::aes(cyl>6, mpg)) +
  ggplot2::geom_point() +
  geom_crossbar_predefined()
```

ggbarplot

*Plot*

---

**Description**

Plot

**Usage**

```
ggbarplot(  
  data,  
  col,  
  orientation = "h",  
  fill = NULL,  
  title = NULL,  
  position = "stack",  
  ...  
)
```

**Arguments**

data	a dataset to plot (dataframe)
col	column of dataframe to plot (don't quote)
orientation	orientation of barplot ("h" / "horizontal" / "v" / "vertical")
fill	column of dataframe to color based on (don't quote)
title	title of graph (string)
position	see ?ggplot2::geom_bar for details (Usually one of: "stack", "dodge", "fill")
...	set any other barplot property. See ?ggplot2::geom_bar for details. (e.g. alpha = 0.4)

**Value**

ggplot

**Examples**

```
ggbarplot(iris, Species, fill = Species, orientation = "horizontal", title = "My Freq Graph")
```

---

`ggdensity`*Density Plot*

---

**Description**

Density Plot

**Usage**

```
ggdensity(  
  data,  
  col,  
  fill = "steelblue",  
  alpha = 0.5,  
  summary_stats = FALSE,  
  text_xpos = NULL,  
  text_ypos = 0.04,  
  text_sigfigs = Inf,  
  ...  
)
```

**Arguments**

<code>data</code>	<code>dataframe</code>
<code>col</code>	column (don't quote)
<code>fill</code>	<code>geom_density</code> fill color
<code>alpha</code>	<code>geom_density</code> alpha color
<code>summary_stats</code>	add text with summary stats to plot (boolean)
<code>text_xpos</code>	x position of summary stat text (numeric)
<code>text_ypos</code>	y position of summary stat text (numeric)
<code>text_sigfigs</code>	number of significant figures to write summary statistic to (numeric)
<code>...</code>	other <code>geom_density</code> aesthetics (e.g. <code>linetype = "dashed"</code> )

**Value**`ggplot`**Examples**

```
ggdensity(mtcars, mpg, summary = TRUE)
```

---

 scale\_show\_infinities\_x

*Include Infinite Values in Plot*

---

### Description

Will replace infinite values by the nearest limit.

### Usage

```
scale_show_infinities_x(
  trans = "identity",
  limits = NULL,
  position = "bottom",
  breaks = ggplot2::waiver(),
  ...
)
```

### Arguments

- |          |   |
|----------|---|
| trans    | <p>For continuous scales, the name of a transformation object or the object itself. Built-in transformations include "asn", "atanh", "boxcox", "date", "exp", "hms", "identity", "log", "log10", "log1p", "log2", "logit", "modulus", "probability", "probit", "pseudo_log", "reciprocal", "reverse", "sqrt" and "time".</p> <p>A transformation object bundles together a transform, its inverse, and methods for generating breaks and labels. Transformation objects are defined in the scales package, and are called &lt;name&gt;_trans (e.g., <code>scales::boxcox_trans()</code>). You can create your own transformation with <code>scales::trans_new()</code>.</p> |
| limits   | <p>One of:</p> <ul style="list-style-type: none"> <li>• NULL to use the default scale range</li> <li>• A numeric vector of length two providing limits of the scale. Use NA to refer to the existing minimum or maximum</li> <li>• A function that accepts the existing (automatic) limits and returns new limits. Also accepts rlang <code>lambda</code> function notation. Note that setting limits on positional scales will <b>remove</b> data outside of the limits. If the purpose is to zoom, use the limit argument in the coordinate system (see <code>coord_cartesian()</code>).</li> </ul>   |
| position | <p>For position scales, The position of the axis. left or right for y axes, top or bottom for x axes.</p>   |
| breaks   | <p>One of:</p> <ul style="list-style-type: none"> <li>• NULL for no breaks</li> <li>• <code>waiver()</code> for the default breaks computed by the <a href="#">transformation object</a></li> <li>• A numeric vector of positions</li> </ul>  |

- A function that takes the limits as input and returns breaks as output (e.g., a function returned by `scales::extended_breaks()`). Also accepts `lambda` function notation.

... Other arguments to `ggplot2::scale_x_continuous` or `ggplot2::scale_y_continuous`

### Details

This function also allows you to pass arguments along to `ggplot2::scale_x_continuous()` since once you add this call you won't be able to edit the continuous scale elsewhere. Oftentimes you'll want to use the `trans` argument to, for example, visualize your data on a log scale.

### Value

ScaleContinuousPosition object that can be added to a ggplot object using '+'

### See Also

[scale\\_show\\_infinites\\_y\(\)](#)  
[ggplot2::scale\\_x\\_continuous\(\)](#)

### Examples

```
## Not run:
data = mtcars
  dplyr::mutate(qsec2 = ifelse(qsec > 19, Inf, qsec))

# Plot with infinities set to nearest limit
data %>%
  ggplot2::ggplot(ggplot2::aes(x=qsec2, y=carb)) +
  ggplot2::geom_point() +
  scale_show_infinites_x()

# Plot on a log10 scale with infinities set to nearest limit
data %>%
  ggplot2::ggplot(ggplot2::aes(x=qsec2, y=carb)) +
  ggplot2::geom_point() +
  scale_show_infinites_x(trans="log10")

## End(Not run)
```

---

scale\_show\_infinites\_y

*Include Infinite Values in Plot*

---

### Description

Will replace infinite values by the nearest limit.

**Usage**

```
scale_show_infinities_y(
  trans = "identity",
  limits = NULL,
  position = "bottom",
  breaks = ggplot2::waiver(),
  ...
)
```

**Arguments**

trans	For continuous scales, the name of a transformation object or the object itself. Built-in transformations include "asn", "atanh", "boxcox", "date", "exp", "hms", "identity", "log", "log10", "log1p", "log2", "logit", "modulus", "probability", "probit", "pseudo_log", "reciprocal", "reverse", "sqrt" and "time". A transformation object bundles together a transform, its inverse, and methods for generating breaks and labels. Transformation objects are defined in the scales package, and are called <name>_trans (e.g., <code>scales::boxcox_trans()</code> ). You can create your own transformation with <code>scales::trans_new()</code> .
limits	One of: <ul style="list-style-type: none"> <li>• NULL to use the default scale range</li> <li>• A numeric vector of length two providing limits of the scale. Use NA to refer to the existing minimum or maximum</li> <li>• A function that accepts the existing (automatic) limits and returns new limits. Also accepts rlang <code>lambda</code> function notation. Note that setting limits on positional scales will <b>remove</b> data outside of the limits. If the purpose is to zoom, use the limit argument in the coordinate system (see <code>coord_cartesian()</code>).</li> </ul>
position	For position scales, The position of the axis. left or right for y axes, top or bottom for x axes.
breaks	One of: <ul style="list-style-type: none"> <li>• NULL for no breaks</li> <li>• <code>waiver()</code> for the default breaks computed by the <a href="#">transformation object</a></li> <li>• A numeric vector of positions</li> <li>• A function that takes the limits as input and returns breaks as output (e.g., a function returned by <code>scales::extended_breaks()</code>). Also accepts rlang <code>lambda</code> function notation.</li> </ul>
...	Arguments passed on to <code>scale_show_infinities_x</code>

**Value**

ScaleContinuousPosition object that can be added to a ggplot object using '+'

**See Also**

[scale\\_show\\_infinities\\_x\(\)](#)

**Examples**

```
## Not run:
data = mtcars %>%
  dplyr::mutate(qsec2 = ifelse(qsec > 19, Inf, qsec))

# Plot with infinities set to nearest limit
data %>%
  ggplot2::ggplot(ggplot2::aes(x=carb, y=qsec2)) +
  ggplot2::geom_point() +
  scale_show_infinities_y()

# Plot on a log10 scale with infinities set to nearest limit
data %>%
  ggplot2::ggplot(ggplot2::aes(x=carb, y=qsec2)) +
  ggplot2::geom_point() +
  scale_show_infinities_y(trans="log10")

## End(Not run)
```

---

theme\_axis\_titles\_cleveland

*Custom Themes*

---

**Description**

Custom Themes

**Usage**

```
theme_axis_titles_cleveland()
```

**Value**

ggtheme

---

theme\_common\_adjustments

*Custom Themes*

---

**Description**

ggplot theme that fixes a bunch of issues I tend to have with plots.

**Usage**

```
theme_common_adjustments(  
  dist_from_plot_xlab = 10,  
  dist_from_plot_ylab = 10,  
  dist_from_plot_ggtitle = 10,  
  no_background = FALSE,  
  subtitle_face = "plain"  
)
```

**Arguments**

```
dist_from_plot_xlab  
    distance between x axis title and plot (number)  
dist_from_plot_ylab  
    distance between y axis title and plot (number)  
dist_from_plot_ggtitle  
    distance between y axis title and plot (number)  
no_background    set all backgrounds to clear? (flag)  
subtitle_face    Font face ("plain", "italic", "bold", "bold.italic")
```

**Details**

By default, will bold center axis and plot titles and tweak distane of axis\_titles to plot

**Value**

ggtheme

**Examples**

```
mtcars %>%  
  ggplot2::ggplot(ggplot2::aes(cyl>6, mpg)) +  
  ggplot2::geom_point() +  
  theme_common_adjustments()
```

---

theme\_fivethirtyeight\_two  
*Custom Themes*

---

**Description**

Custom Themes

**Usage**

```
theme_fivethirtyeight_two()
```

**Value**

ggtheme

---

theme\_legend\_bottom    *Custom Themes*

---

**Description**

Custom Themes

**Usage**

```
theme_legend_bottom(direction = "horizontal")
```

**Arguments**

direction        "Vertical or Horizontal"

**Value**

ggtheme

---

theme\_legend\_left        *Custom Themes*

---

**Description**

Custom Themes

**Usage**

```
theme_legend_left(direction = "vertical")
```

**Arguments**

direction        "Vertical or Horizontal"

**Value**

ggtheme

---

theme_legend_none	<i>Custom Themes</i>
-------------------	----------------------

---

**Description**

Custom Themes

**Usage**

```
theme_legend_none()
```

**Value**

ggtheme

---

theme_legend_right	<i>Custom Themes</i>
--------------------	----------------------

---

**Description**

Custom Themes

**Usage**

```
theme_legend_right(direction = "vertical")
```

**Arguments**

direction	"Vertical or Horizontal"
-----------	--------------------------

**Value**

ggtheme

---

theme\_legend\_title\_none  
*Custom Themes*

---

**Description**

Custom Themes

**Usage**

theme\_legend\_title\_none()

**Value**

ggtheme

---

theme\_legend\_top      *Custom Themes*

---

**Description**

Custom Themes

**Usage**

theme\_legend\_top(direction = "horizontal")

**Arguments**

direction      "Vertical or Horizontal"

**Value**

ggtheme

---

theme\_minimal\_bordered  
*Miminal theme with border*

---

**Description**

A minimal theme with a border. Works well for faceted graphs

**Usage**

```
theme_minimal_bordered(border_color = "grey40", border_thickness = NULL, ...)
```

**Arguments**

border\_color    Colour of border  
border\_thickness  
                 border thickness in mm  
...              Arguments passed on to `ggplot2::theme_minimal`  
base\_size    base font size, given in pts.  
base\_family   base font family  
base\_line\_size   base size for line elements  
base\_rect\_size   base size for rect elements

**Examples**

```
mtcars %>%
  ggplot2::ggplot(ggplot2::aes(x = mpg, y=disp)) +
  ggplot2::geom_point() +
  theme_minimal_bordered()
```

---

theme\_no\_legend            *Remove theme legend*

---

**Description**

**[Deprecated]**

**Usage**

```
theme_no_legend(...)
```

**Arguments**

...              no arguments are used. Included only so code written for older versions of package doesn't break

**Value**

theme

---

theme\_no\_legend\_title *Remove theme legend*

---

**Description**

**[Deprecated]**

**Usage**

theme\_no\_legend\_title(...)

**Arguments**

... no arguments are used. Included only so code written for older versions of package doesn't break

**Value**

theme
